EDUCATION

STONY BROOK UNIVERSITY

Bachelor of Science in Computer Science

Cumulative GPA: 3.51/4.0

Relevant Coursework: Systems Programming (C), Software Development (MERN), Data Structures, Analysis of Algorithms

Stony Brook, NY

Expected 05/2028

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java, Python, C, C#

Frontend: React, Next.js, HTML, CSS, Framer Motion, Node.js, Express, MongoDB

Design & Tools: Figma, Git/GitHub, Docker, VS Code, Android Studio

EXPERIENCE

Undergraduate Researcher, UX Engineering — MOCA Lab, Stony Brook University

Aug 2026 – Present

- Redesigning the ADL (Activities of Daily Living) labeling interface for a smartwatch/Android app used by older adults in real-home sensing deployments; working in the existing Java/Android codebase to evaluate and revise the in-app capture flow.
- Diagnose accuracy loss in virtual-button timestamp capture and specified alternative input modalities (speech, physical buttons, confirm-don't-recall prompts) grounded in prior deployment studies with older adults: cutting the interaction down to a single yes/no confirmation instead of free time entry.
- Authoring the interface design spec driving v1 of the labeling flow ahead of user trials with older adults in the Stony Brook community.

System Staff Student Assistant — Stony Brook University, CS Department

June 2026 – Present

- Deployed and administered a self-hosted digital signage platform (Docker) for the department, managing remote configuration, content updates, and cross-platform deployment.
- Write technical documentation for deployment, troubleshooting, and hardware/software procedures used across the department.

PROJECTS

homeAid — Home Repair Matching App (Hackathon)

June 2026

- Led UX and product design for a matching app connecting aging homeowners with freelance repair workers; designed 18 screens across two user types, including a budget-negotiation flow that resolves the price conversation in-app.
- Built the wireframe suite and brand system in a single weekend using AI-assisted prototyping, iterating on flow structure rather than asset production.

DatPone — Photobooth Web App

Spring 2026 - Present

- Designed and built a photobooth web app (Next.js, TypeScript, Supabase, Framer Motion) with WebRTC phone-as-camera support.
- Established the full visual identity system — custom palette, typography, and a reusable component library — designed in Figma and implemented in code, including a login animation and a 3D photostrip hero.

Phreddit — Full-Stack Social Platform (MERN)

Spring 2026

- Handled the bulk of the React frontend: component architecture, reusable UI elements; fixed a stale-state bug causing comment threads to render flat until refresh.
- Engineered a full-stack Reddit-style platform (MongoDB, Express, React, Node.js) iteratively across three phases: vanilla JS SPA, React SPA, and a complete client-server MERN application. Built alongside a partner using a feature-branch Git workflow and PR-based integration.

LEADERSHIP & DESIGN WORK

Vice President & Graphic Designer — BURSA (Burmese Student Association)

2025-2026

- Direct visual identity for a cultural organization with 600+ Instagram followers, designing event branding, flyers, and social graphics across multiple semesters.
