EDUCATION

STONY BROOK UNIVERSITY

Bachelor of Science in Computer Science

Cumulative GPA: 3.68/4.0

Relevant Coursework:

Data Structures & Algorithms, Object-Oriented Programming, Software Development, Analysis of Algorithms, System Fundamentals

Stony Brook, NY

Expected May 2028

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, C#, C

Technologies/Frameworks: HTML, CSS, React, Node.js, Express, MongoDB

Developer Tools: Git & GitHub, Docker, Figma, VS Code, IntelliJ, Unity, Godot

AI/LLM: LLM API integration (OpenAI, Gemini)

EXPERIENCE

System Staff Student Assistant — Stony Brook University, CS Department

June 2026 – Present

- Deployed and administer a self-hosted digital signage platform (Docker) for the department, managing remote configuration, content updates, and cross-platform deployment (see Projects).
- Write technical documentation for deployment, troubleshooting, and hardware/software procedures used across the department.
- Provide IT support across the department: OS reimaging on lab machines (Windows, Linux, macOS) via FOG PXE and Ventoy; resolve BIOS/UEFI boot failures.

PROJECTS

Phreddit — Full-Stack Social Platform (MERN)

Spring 2026

- Engineered a full-stack Reddit-style platform (MongoDB, Express, React, Node.js) iteratively across three phases: vanilla JS SPA, React SPA, and a complete client-server MERN application. Built alongside a partner using a feature-branch Git workflow and PR-based integration.
- Handled the bulk of the React frontend: component architecture, reusable UI elements, and correct prop-threading through nested components; fixed a stale-state bug causing comment threads to render flat until refresh
- Designed Mongoose schemas and RESTful CRUD APIs for posts, comments, communities, and users; implemented session-based authentication with bcrypt password hashing and cascading-delete logic to preserve referential integrity across the data model.

Xibo Digital Signage Directory — CS Department

July 2026

- Deployed and administered a self-hosted Xibo CMS (Docker Desktop, WSL2) and Windows Player system, replacing physical lobby signage with a live, remotely-manageable digital directory.
- Diagnosed and resolved platform compatibility and display-rendering issues across a Linux-to-Windows migration; configured Tailscale for secure remote CMS management.
- Developing a DataSet-driven, CSV-updatable content layout to replace a static webpage embed with structured, maintainable data.

homeAid — UX/Product Design (Hackathon) — Home Repair Matching App

June 2026

- Led UX and product design for homeAid, a Tinder-style concept matching aging homeowners with freelance repair workers; designed the complete user flow across 18 screens for two user types, including a budget-negotiation interaction pattern, from concept through wireframe.
- Used AI-assisted prototyping (Miro Sidekick) to rapidly generate and iterate on the wireframe suite and mascot brand guide, directing output through detailed prompts rather than manual asset creation: a workflow built for fast, solo iteration under hackathon time constraints.

DESIGN & CREATIVE WORK

Graphic Designer — BURSA (Burmese Student Association)

2025-2026

- Designed event branding, flyers, and social media graphics for a cultural student organization with 600+ Instagram followers, shaping visual identity and driving event turnout across semesters.
